PATENTED NEW IMMUNE THERAPY

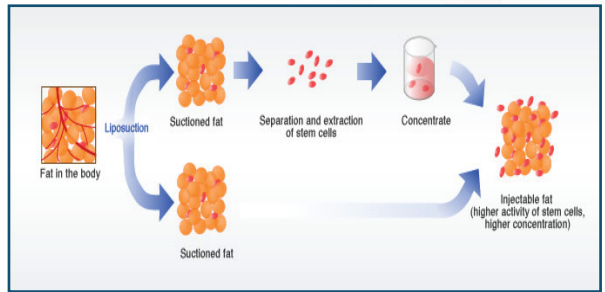

On the cutting edge of medicine is an RSCI Partner located in Mexico, offering ASCT combined with a **newly discovered and patented Immune Therapy**.

The Institute's own Scientific Advisory Board, comprised of Physicians, Scientists, and other Health Professionals collaborated with various research institutions to develop its **own brand new patented Immune Therapy** to be used in conjunction with Adult Stem Cell Therapies in order to provide **faster and longer lasting results via improved immune response and more efficient tissue repair and regeneration. In other words, start by improving the patient's whole immune system. If that is not working properly, the patient stands no chance of improving his/her health!**

This **revolutionary new "T Cell Modulator"** is a leucocyte extract described as a complex molecule whose purpose is to **regulate immune function** by controlling the production of signaling substances (either increasing or decreasing) and **influencing immune cell activity**. The **proprietary** T-Cell Modulator stimulates T Cells to produce higher or lower concentrations of specific interleukins, cytokines and other substances and by doing so directing the activity of natural killer cells, T- cells, B- cells and other immune cells to **perform specific functions tailored to the needs of each patient**.

ASCT & Patented Immune Therapy Combined

This partner uses Autologous Stem Cell Sources, Adipose Tissue (Tummy Fat) or Bone Marrow For ASCT

Revolutionary Regenerative Medicine: ASCT & Patented Immune Therapy Combined

- * Treating Cancer, Diabetes, Kidney & Liver Diseases, Lupus, MS, Parkinson's, and SCI.
- * Stem Cell Source: Autologous Adipose (Tummy Fat)
- * Treatment Length: Five Days
- * Adult Stem Cell IV Application
- * 2 T-Cell Modulation (Patented Therapy) IV Treatments
- * Comprehensive Nutritional Evaluation
- * 3 Month Home Supply of (Patented) lyophilized T-Cell Modulation
- * Airport Shuttle Included
- * Hotel Stay Included

RSCI APPOINTS DIRECTOR OF PATIENT ADVOCACY

While our Chairman and Founder, Don Margolis, has long been known as "The Voice of Stem Cell Science", our new Director of Patient Advocacy brings a fresh voice to the team. **The voice of the patient.**

Heather was first introduced to RSCI **during her six year long, two time battle with Stage Three Breast Cancer**, during which she underwent Chemotherapy twice and endured eight surgeries. Click on the image (left) to view Heather's story of survival. Heather, in renal failure at 33, was told by her doctor that she **would have to become her own advocate if she wanted to survive**. Frustrated with the lack of support and options available in the traditional healthcare system, Heather decided she must do just that. When she began **desperately searching for innovative treatments for her congestive heart failure**, Heather found RSCI and submitted a request for information.

That day she received a call from Don himself and the two talked for hours. By the end of that call, Don knew he had found a kindred spirit, and Heather knew that she wanted to be a part of the mission to bring to mankind the greatest medicine the world has ever known.

As a person who has faced multiple chronic illnesses, and as a future recipient of Adult Stem Cell Therapy, **Heather effortlessly relates to the plight of RSCI patients.**

Heather's personal mission at RSCI is to guide patients on the journey to independence and health while **seamlessly coordinating** the highest levels of patient care available in the world. Contact Heather for a **Complimentary Consultation by calling +1 (214) 556-6377** or by clicking [HERE](#) to complete a short contact form. International patients are always welcome to contact Heather via free Skype Call. Her Skype username is [HitherHeather](#).

CNBC REPORT CALLS ASCT CLINICS "THE WILD WEST"

This month, CNBC broadcasted a report called "**Buyer Beware: The New World of Adult Stem Cells**", which can be viewed by clicking on the image (right).

When asked his thoughts on the report, **Don Margolis** had this to say..."Not only is it true, I believe it is a **powerful illustration of the need for Patient Advocacy Organizations** like Repair Stem Cells Institute.

Though stem cell clinics **are** popping up all over the world, each clinic **treats patients in a different way**, and **using different processes** to prepare the stem cells for implantation. Because the FDA **does not regulate these clinics**, the role of RSCI is to guide patients to facilities that meet the highest standards, have years of experience successfully treating patients, and whose methods meet the highest quality standards, and have proven success.

If Adult Stem Cell Clinics are the 'Wild West' of modern, revolutionary healthcare, **RSCI is your trusted Tour Guide**. For more than a decade, we have searched the world over to **locate, evaluate, and partner with the world's finest physicians and facilities**. We put the knowledge, resources, and experience we've gained at your fingertips. ***We know the apples from the oranges*** and we pass that knowledge **on to the patient**".

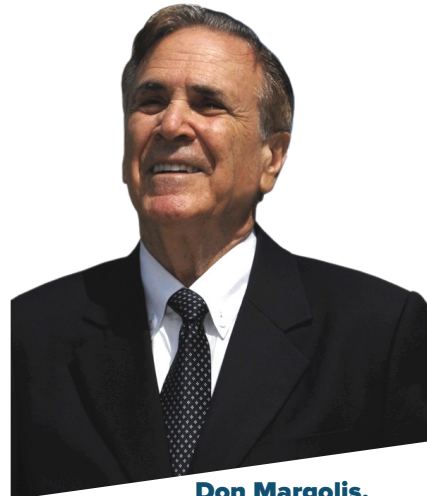

Don Margolis founded the first company in the world to offer ASCT to patients. That Clinic treated over 400 seriously ill heart patients before the first USA stem cell clinic opened its doors. 68% of those patients started living more productive lives, and not one suffered any damage! Next month you will meet a California lady celebrating TEN YEARS of her stem cell success. Visit our Testimonials page to learn more.

We thank you so much for spending your time today to read our newsletter. RSCI truly appreciates your time and support. **Until next time, we wish you every success on the journey to regain YOUR health!**
